APP OPERATION INSTRUCTIONOF SMART SENSOR

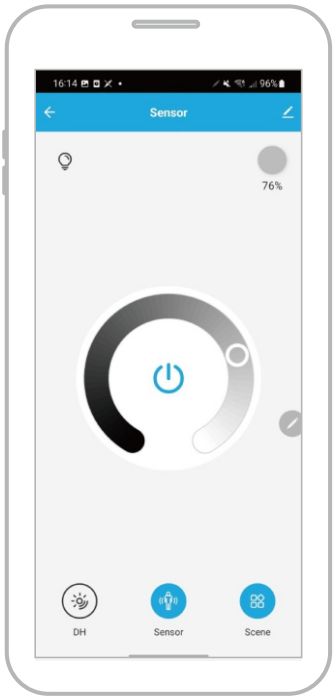
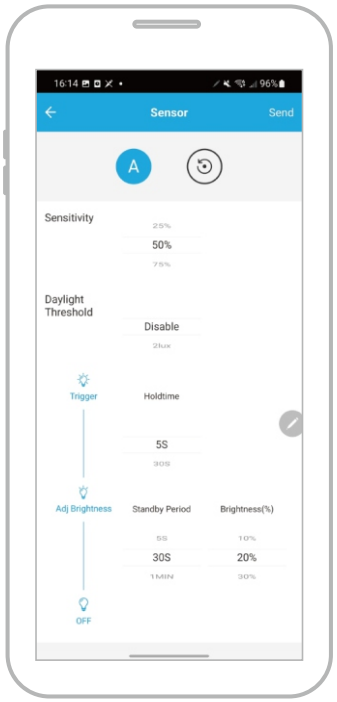
HIGH-END TRIM

High-end Trimming is a very practical function for customers who prefer to have less than 100% brightness everytime the sensordetects motion, and our steps to approach it is very easy.



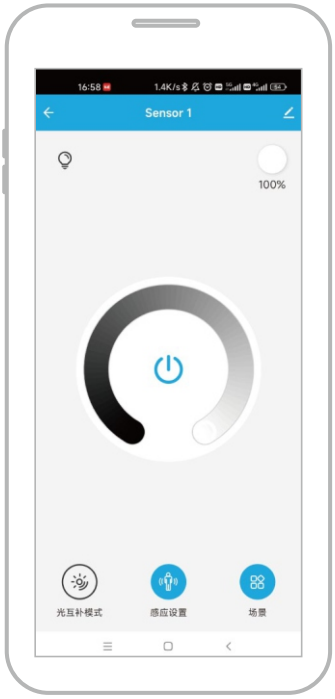


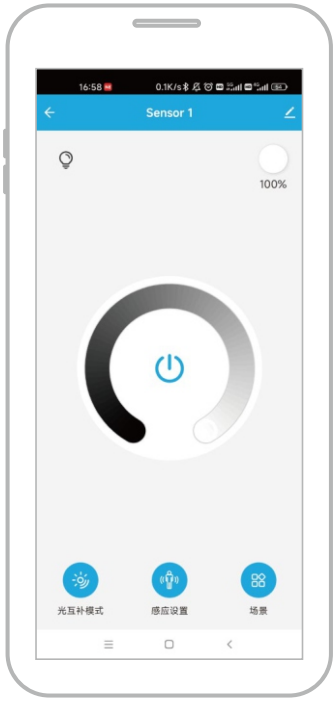
STEPS

- Dim the light to a level, for example 76%, simply by moving the block
- Press "sensor" at the bottom center and start making a program
- Tthen press "A" means running automation
- After setting, the sensor works as dimming to only 76% everytime it detects motion

DAYLIGHT HARVESTING

Daylight Harvesting function offers the possibility to dim the light brightness along with the change of natural brightness; when outside gets darker, indoor environment should become brighter.





STEPS

- Press "sensor" at the bottom center and start making a program, daylight must be chosen higher than 50lux, meanwell the standby period should be 0S
- After setting, the sensor works as dimming to only 76% everytime it detects motion
